```

• 表格

	同包	不同包
Public	允许	允许
Private	不允许	不允许
Protected	不允许	不允许
友好的	允许	不允许

```
public class College {
    String name ;
    public College(String name){
        this.name = name;
    Student cxt = new Student( number: 2021100733);
    public String stuMsg(){
class Student {
    Student(long number){
        this.number = number;
```

```
package cn.edu;
import cn.edu.jnu.College;

public class University {
    String name = "Jinan";
    1 个用法
    College a = new College( name: "智科院");
    public void show(){
        System.out.println(a.stuMsg());
    }
}
```

public 不同的包和同一个包都允许访问

private 类只允许在一个 class 内访问,同包/不同包的其他类都不能访问

友好类只能访问同一个 package 中没有 public/private 修饰的方法

protect 类只允许子类以及子类的子类访问
